

"Electronic Password Wallet"

ABSTRACT OF THE DISCLOSURE

[0072] A convenient and secure system and method for access to any number of
5 password-protected computer applications, web sites and forms without adding to the
user cognitive load and without circumventing the inherent security of such
password-protection schemes. An existing password field on a device display is
overlaid with password wallet pop-up field which allows a wallet "master" key to
unlock the wallet. An application-specific and/or user-specific password is
10 automatically retrieved from the wallet and entered into the password field with no
other user action required.
